Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The patent term adjustment to date is 207 days. If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the term adjustment will be 207 days.

If a continued prosecution application (CPA) was filed in the above-identified application, the filing date that determines patent term adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system. (<http://pair.uspto.gov>)

Any questions regarding the patent term extension or adjustment determination should be directed to the Office of Patent Legal Administration at (703)305-1383.

Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

Allowable Subject Matter

2. Claims 23-33, 37-47, and 51-53 are allowed.

3. The following is an examiner's statement of reasons for allowance: The above claims are allowed over the closest references, U.S. Patent No. 6,239,058 to Shamshoum *et al.*, U.S. Patent No. 5,674,795 to Wassserman *et al.*, Ribeiro *et al.*, and U.S. Patent No. 5,965,677 to Stephan *et al.*

The present invention relates to a process for polymerizing olefin(s) comprising the steps of preparing a catalyst composition by first combining a catalyst compound and a supported alumoxane or aluminum alkyl activators followed by combining an ionizing activator to form a catalyst composition wherein the ionizing activator is a compound represented by the formula $(L'-H)_d^+(A^{d-})$, followed by contacting the catalyst composition with one or more olefins under polymerizing conditions to form a polyolefin.

U.S. Patent No. 6,239,058 to Shamshoum *et al.* teaches a process for polymerizing olefins using a metallocene compound supported on silica treated with methylalumoxane, followed by contacting the supported catalyst with a trialkylaluminum compound. The prior art teaches all elements of the present claim except use of an ionizing activator having general formula $(L'-H)_d^+(A^{d-})$. One having ordinary skill in the art, having understood the teachings in Shamshoum *et al.*, would not find it obvious to replace the trialkylaluminum compound with ionizing activators $(L'-H)_d^+(A^{d-})$ in order to arrive at the present claims.

Art Unit: 1713

U.S. Patent No. 5,674,795 to Wasserman *et al.* teaches a process for polymerization of olefins in the presence of a catalyst composition comprising combining a metallocene with MAO supported on silica. In the second step, the resulting mixture is combined with aluminum alkyl co-catalyst. Finally, the last step requires contact of the resulting catalyst with olefin to effect polymerization. The inventors contemplate the use of ionic salts of general formula $[A^+][BR^*_4]$, however, they do not indicate that a catalyst component using both MAO and $[A^+][BR^*_4]$ is to be used. That is, the reference does not teach substitution of aluminum alkyl co-catalyst with $[A^+][BR^*_4]$. One having ordinary skill in the art would not find it obvious to do so in order to arrive at the present claims.

The review article by Ribeiro *et al.* provides many examples of polymerization process which involve use of a metallocene with a supported alumoxane (MAO). In a subsequent step, the supported catalyst is combined with a trialkylaluminum compound or with a further quantity of alumoxane. Although it is recognized that MAO qualifies as an ionizing activator, the reference does not teach use of ionizing activators having general formula $(L'-H)_d^+(A^{d-})$. Therefore, the skilled artisan would not find it obvious to modify the processes illustrated in the reference in order to arrive at the present claims.

U.S. Patent No. 5,965,677 to Stephan *et al.* teaches a process for polymerizing olefins in the presence of a catalyst comprising a transition metal complex, and a (silica) supported activator wherein the activator is an alumoxane or a non-coordinating anion complex. The claims make no reference to use of an additional ionizing activator having general formula $(L'-H)_d^+(A^{d-})$.

Art Unit: 1713

Stephan *et al.* does indicate that a non-coordinating anion compound may be used as an activator in combination with the catalyst component of the invention. However, there is no clear teaching that ionizing activators are to be used in conjunction with MAO/silica. There is one teaching in which an ionizing activator is used with aluminum alkyl/silica, but it is not of the type recited in the present claims. Thus, it is not immediately obvious to one having skill in the art to modify the teachings of the prior art in order to arrive at the present claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record but not relied upon is considered pertinent to the Applicant's disclosure. The following references relate to supported catalyst systems relevant to the present invention.
